

**1. I have started work on my project with conversation (interview) with the inhabitants of my city about correction of safety of road traffic in our region. I have assigned three questions concerning my idea about speed management:**

I. Can stickers reminding about safe speed have an influence on road situation?

YES 64% NOT 36%

II. Where should be the sticker that influenced most preferably at drivers?

a. On the side of the glass from the driver's side, to remind him each time when getting into the car and performing maneuvers

55%

b. On the trunk, in place where it will be visible to driver who drive behind us.

45%

III. Would you willing to put this sticker on your car?

YES 82% NOT 18%

**2. Next step it was to elaboration of project budget. Taking into account the number of the inhabitants of my area and not everyone having a car will want a sticker, I received it will be close to 700 stickers in the price 1 PLN.**

**3. I have worked out the sticker, which must be simple in my opinion but at the same time forceful. Analyzing the results of interview among the inhabitants I decided that there are two types of stickers, little different from one another, placed in one of two places on the car.**

4. With the help of local police in an unmarked way I was able to carry out speed checks on roads in my area. This activity will be a point of reference when I will examine the results obtained in the final part of the project.

Roads	Speed limit	Speed achieved by drivers
National (number 7)	100km/h	110-140 km/h
Voivodship	90km/h	100-120 km/h
Municipal	90km/h	100-120 km/h
Nidzica Town	60/50 km/h	70-90 km/h

5. Next, I will produce and introduce stickers to use. The product will be reached to inhabitants through the local Police, as well as children who will serve a sticker to his parents.
